## 1 Environment Diagram

### 1.1 Questions

1. (Fall 2012) Draw the environment diagram.
def box (a):
def box(b):
def box(c):
a. append (c)
return (a, b)
return box
gift = box(1)
return (gift(2), gift(3))
box ([4])

### 2.1 Questions

1. (Summer 2015 Final) The TAs are building a social networking website called CS61A+. The TAs plan to represent the network in a class called Network that supports the following method:

- add_friend (user1, user2) adds user1 and user2 to each other's friends lists. If user1 or user 2 are not in the Network, add them to the dictionary of friends.

Help the TAs implement these two methods to make their social networking website popular!

```
class Network:
```

    "" "
    >>> cs6la_plus = Network()
    >>> cs6la_plus.add_friend('Robert', 'Jeffrey')
    >>> cs61a_plus.friends['Robert']
    ['Jeffrey']
    >>> cs6la_plus.friends['Jeffrey']
    ['Robert']
    >>> cs6la_plus.add_friend('Jessica', 'Robert')
    >>> cs61a_plus.friends['Robert']
    ['Jeffrey', 'Jessica']
    "" "
    def __init__(self):
        self.friends \(=\) \{ \(\quad\) Maps users to a list of their friends
    def add_friend(self, user1, user2):
    $\qquad$ :
$\qquad$
if $\qquad$ :
$\qquad$
$\qquad$
$\qquad$

CS61A+ turns out to be unpopular. To attract more users, the TAs want to implement a feature that checks if two users have at most $n$ degrees of separation. Consider the following CS61A+ Network:

```
self.friends = {
    'Robert': ['Jeffrey', 'Jessica'],
    'Jeffrey': ['Robert', 'Jessica', 'Yulin'],
    'Jessica': ['Robert', 'Jeffrey', 'Yulin'],
    'Yulin': ['Jeffrey', 'Jessica'],
    'Albert': []
}
```

- There is 1 degree of separation between Robert and Jeffrey, because they are direct friends.
- There are 2 degrees of separation between Robert and Yulin (Robert $\rightarrow$ Jessica $\rightarrow$ Yulin)
- The degree of separation between Albert and anyone else is undefined, since Albert has no friends.
class Network:
\# Code from previous question
def degrees(self, user1, user2, $n$ ):
"""In these doctests, assume cs6la_plus is a Network with the dictionary of friends described in the example.
>>> cs6la_plus.degrees('Robert', 'Yulin', 2) \# Exactly 2 degrees True
>>> cs61a_plus.degrees('Robert', 'Jessica', 2) \# Less than 2
degrees
True
>>> cs61a_plus.degrees('Yulin', 'Robert', 1) \# More than 1
degree
False
>>> cs6la_plus.degrees('Albert', 'Jessica', 10) \# No friends!
False
"" "
if
return True
elif
$\qquad$ _:
return False
for friend in $\qquad$ _:
$\qquad$ :
return True
return $\qquad$

### 3.1 Questions

1. Write a function that takes in a tree and a value x and returns a list containing the nodes along the path required to get from the root of the tree to a node containing $x$.

If $x$ is not present in the tree, return None. Assume that the entries of the tree are unique.
For the following tree, find_path (t, 5) should return [2, 7, 6, 5]

## 4 Recursion

### 4.1 Questions

1. (Fall 2013) Fill in the blanks in the implementation of paths, which takes as input two positive integers $x$ and $y$. It returns the number of ways of reaching $y$ from $x$ by repeatedly incrementing or doubling. For instance, we can reach 9 from 3 by incrementing to 4 , doubling to 8 , then incrementing again to 9 .
```
def inc(x):
    return x + 1
def double(x):
    return x * 2
def paths(x, y):
    """Return the number of ways to reach y from x by repeated
    incrementing or doubling.
    >>> paths(3, 5) # inc(inc(3))
    I
    >>> paths(3, 6) # double(3), inc(inc(inc(3)))
    2
    >>> paths(3, 9) # E.g. inc(double(inc(3)))
    3
    >>> paths(3, 3) # No calls is a valid path
    1
    " ""
    if }x>y
        return
    elif x == y:
        return
    else:
        return
```

$\qquad$

### 5.1 Questions

1. You are trying to communicate with your project partner but Evil Eve is attempting to intercept your messages. Write a function insert_secret that takes a LinkedList, lnk, and a string secret and mutates lnk by interleaving the secret message into the linked list. Look at the doctests for details. (You can assume that the length of the secret message is less than or equal to the length of the linked list)
def insert_secret(lnk, secret):
"" "
>>> two_link $=\operatorname{Link}(1, \operatorname{Link}(2))$
>>> insert_secret (two_link, 'f')
>>> two_link
Link(1, Link('f', Link(2)))
>>> surprise $=\operatorname{Link}(8, \operatorname{Link}(8))$
>>> insert_secret(surprise, 'CS')
>>> surprise
Link(8, Link('C', Link(8, Link('S'))))
"""

### 6.1 Questions

1. Write make_skipper, which takes in a number n and outputs a function. When this function takes in a number $x$, it prints out all the numbers between 0 and $x$, skipping every nth number (meaning skip any value that is a multiple of $n$ ).
```
def make_skipper(n):
    """
    >>> a = make_skipper(2)
    >>> a(5)
    I
    3
    5
    """
```

## 7 Iterator/Generator

### 7.1 Questions

1. Write a generator function generate_subsets that returns all subsets of the positive integers from 1 to $n$. Each call to this generator's next method will return a list of subsets of the set $[1,2, \ldots, n]$, where $n$ is the number of previous calls to next.
```
def generate_subsets():
    """
    >>> subsets = generate_subsets()
    >>> for _ in range(3):
    ... print (next(subsets))
    ...
    [[]]
    [[], [1]]
    [[], [1], [2], [1, 2]]
    " ""
```

### 8.1 Questions

1. Write a query that outputs all divisions for which there is more than one employee, and all pairs of employees within that division have a salary less than 100,000.

Reminder: we are using a table named records that stores information about the employees at a small company ${ }^{1}$. Each of the eight rows represents an employee.

| Name | Division | Title | Salary | Supervisor |
| :--- | :--- | :--- | :--- | :--- |
| Ben Bitdiddle | Computer | Wizard | 60000 | Oliver Warbucks |
| Alyssa P Hacker | Computer | Programmer | 40000 | Ben Bitdiddle |
| Cy D Fect | Computer | Programmer | 35000 | Ben Bitdiddle |
| Lem E Tweakit | Computer | Technician | 25000 | Ben Bitdiddle |
| Louis Reasoner | Computer | Programmer Trainee | 30000 | Alyssa P Hacker |
| Oliver Warbucks | Administration | Big Wheel | 150000 | Oliver Warbucks |
| Eben Scrooge | Accounting | Chief Accountant | 75000 | Oliver Warbucks |
| Robert Cratchet | Accounting | Scrivener | 18000 | Eben Scrooge |
