Computational Structures in Data Science

(Serious-ish) Ed Questions

Question

I've struggled in this class and worry about my ability to keep up in future data science courses. Is there still a place or path for me in data science?

Question

How is Data 100 different from CS 61B? Should I take one before the other

Question

I'm taking c88c concurrently with Data 8, and I find the coding part in this class way more interesting than the statistics in Data 8. I plan to take a DS minor, so I wonder if the higher-level DS classes require more statistics or more CS skills.

How different is the data science major from the minor? Should I double-major or just do the minor? My current intended major is Cognitive Science for reference.

Question

I'm trying to minor in data science and plan on taking the data 100 track. What is the difference between data100/python and stat131A&133/R? Also, are there any classes that you recommend taking for data science electives? What about classes for people who want a career in data science?

Question

As a psychology major, what are entry level data science jobs you'd recommend within psychology research? Are data analysis skills mainly applied to psych research lab setting, or are there other areas such as education psychology or counseling willing to use DS skills?

Question

How different is the data science major from the minor?
Should I double-major or just do the minor? My current intended major is Cognitive Science for reference.
